Clones are derived from the rat BAC library CHORI-230
(http://www.chori.org/Dacpac/rat230.htm). For BAC library
availability, please contact Pieter de Jong (pdejongémail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.tlgr.org/tdb/bac_ends/rat/bac_end_intro.html
Plate: 112 row: K column: 20
ECORI; 7-day-old protonemal tissue was incubated 10-4M ABA for Ich hours before RNA isolation. CDNA was synthesised from Amersham's CDNA Sythesis Plus kit and ligated with ECORI-NOLI linkers for cloning in the ECORI site of Lampda Zaplī (Stratagene). After packaging, the library was propogated in E. coli XL.I Blue cells and amplified. The library was excised by mass excision in SOLR cells and amplifilan resistant transforments selected. Approximately, 1,000,000 colonies were grown and recovered. The double stranded plasmid library was recovered and used to transform DHOD cells by electroporation. Clones corresponding to abundant transcripts were identified by colony hybridization using a cDNA probe derived from untreasted protonematal tissue, and eliminated from the library, by rearraying."

                approaches to facilitate gene discovery', Genome Research 6:791-806, 1996. The first strand synthesis used a NotI-dTIB primer; double stranded cDNAs were ligated to ECORI adapters, digested with NotI, and directionally cloned into the NotI and ECORI digested pT713-Pac vector. The library contained approximately 7.2 X 10^5 recombinants, with average insert sizes of 1-1.5 kb."

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tall. CDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) POLYA-Yes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

/note="Vector: Lambda Uni-ZAP XR (Stratagene); Site 1: ECORI; Site_2: XhoI; mRNA was purified from 2 x 10E3 rhabditiform larvae which had been isolated from gerbils experimentally infected with larvae originally isolated from experimentally infected dogs. cDNA was constructed and, using adaptors, was cloned undirectionally into the vector from the EcoRI site to the XhoI site. The library has an unamplified titer of 1 x 10E5 pfu/ml and an amplified, undiluted titer of 9 x 10E11 pfu/ml. The average insert size of the unamplified library is 675 bp (range, 100-170)."

FEATURES

```
(http://www.jax.orgyresources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 74 DNA polymerase and 74 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (qi|4732114|qb|AR123072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Second strand DNA was synthesized by E. coli DNA polymerase I in combination with E. coli RNAse H and E. coli DNA ligase. Double stranded cDNA was ligated with SalI adapter. These cDNAs were cloned into the SalI/NotI site of pBluescript KS+ and transformed into E. coli Electromax DH10B by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /clone_lib="NICHD Zebrafish normalized I"

Seeds were surface sterilized then germinated under axenic
conditions in the dark at room temperature on filter paper
conditions in the dark at room temperature on filter paper
conditions in the dark stroom temperature on filter paper
conditions in the dark stroom temperature on filter paper
conditions in the dark stroom seedlings were
incubated at 5cc for 2 days. Shoots were then harvested,
total RNA was prepared, poly(A) RNA was purified, one
primary unamplified cDNA library was made, and 600000 pfu
were in vivo excised to give pBluescript SK(-) cDNA
phagemids. These steps were performed in the TJ Close
laboratory at the University of California, Riverside
choi, Close, Fenton). Phagemids were plated and picked at
the Clemson University Genomics Institute (CUGI) (Begum,
Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations
, DNA sequencing and sequence analysis were performed at
CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main
). The sequence has been trimmed to remove vector sequence
above. For more details on library preparation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GSS 13-MAY-2000

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the places is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* This sequence will be replaced

* This sequence will be replaced

* This sequence will be replaced

* This sequence will be prepared

* This secuence will be replaced

* The accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The 3' clone is F8M12, 200 bp overlap. Actual start of this clone is at base position 1 of F2P3; actual end is at 23552 of F8M12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MAPPING: Clones were assigned to the YAC map by hybridization by M. Lodhi, Cold Spring Harbor Laboratories, and fingerprinted by M. Marra, WashU, to pick the best candidates for sequencing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="similar to translation initiation factor IF-1"
